

# Safe – Flexible – Inconspicuous

The SERVOX Soft Tube 22 is a high-quality tracheal cannula made of soft, flexible silicone. It is available in sieved and unsieved versions in different lengths and

sizes and its 22 mm connector enables it to be used in conjunction with a wide range of products.

The SERVOX Soft Tube 22 marks a further improvement in the development of the tried and tested Servotube. The thermosensitive silicone adapts to the anatomy of the trachea, ensuring optimum wearing comfort without impairing the stabilising function of the cannula.

The innovative, funnel-shaped transition from cannula tube to shield greatly improves the sealing of the tracheostoma, making speaking much easier. The voice sounds clearer and more powerful.

The SERVOX Soft Tube 22 is extremely gentle on tissues on insertion thanks to the special processing of the surface. The adhesion of annoying secretions is considerably reduced.

Filter elements, tracheostoma valves and speaking valves can be connected to the standard 22 mm connector, as well as any other product intended for this type of connection.
